Read Me: Group Project – Vo _ Hoang _ Nguyen

I.   Software

- Stata (version 16 or later recommended)
- Internet connection may be required the first time if `outreg2` needs to be installed via `ssc`.

II.   Folder Structure

Keep the project folder structure unchanged:

```
Vo-Hoang-Nguyen-298-Replication/
├── Analysis/
│   ├── Analysis.do
│   ├── Analysis.log
│   ├── Figure1.gph
│   └── table*.xls / table*-modified.*
├── Data/
│   └── Names.dta
├── finalpaper.docx
├── finalpaper.pdf
└── readme.pdf
```

III.   Data

All results are generated from: `Data/Names.dta` (No additional preprocessing is required.)

IV.   Steps to Reproduce

1. Open Stata.
2. Set the working directory to the **project root folder** (`Vo-Hoang-Nguyen-298-Replication`).
3. Run the main do-file:
4. `do "Analysis/Analysis.do"`

V.   Outputs

Running `Analysis/Analysis.do` reproduces the project outputs, including:

- `Analysis/Analysis.log` (complete Stata log)
- `Analysis/Figure1.gph` (main figure)
- `Analysis/table1.xls`, `Analysis/table2.xls`, `Analysis/table3.xls` and modified versions (formatted regression tables)

All results reported in the replication paper are reproducible by executing the single do-file above.
